1 Introduction and Installation

1.1 Product Introduction

AntarView Pro can be installed in mobile devices running Android 4.0/ iOS 6.0 or above. Our software supports cloud platforms. Once you log in to your cloud account, you may manage the device which is bound to your cloud account and other operations mentioned above.

AntarView Pro Mobile APP supports WIFI, 3G/4G network connection. You are advised to connect the device to a public network and enable the AntarView Pro function, which is enabled by default, before managing the device.

Notes:

- Wi-Fi, 3G or 4G data connection is required.

1.2 Operating environment

Android: Android 4.0 and above.

iOS: IOS 6.0 and above.

1.3 Software installation

1. Log in to our official website, download the software to your PC and copy that to your cell phone for installation.
2. Log in to Google Play/ App Store, search and download “AntarView Pro Mobile” for installation.
3. Scan the QR code as shown below with your mobile phone to download and install the software.

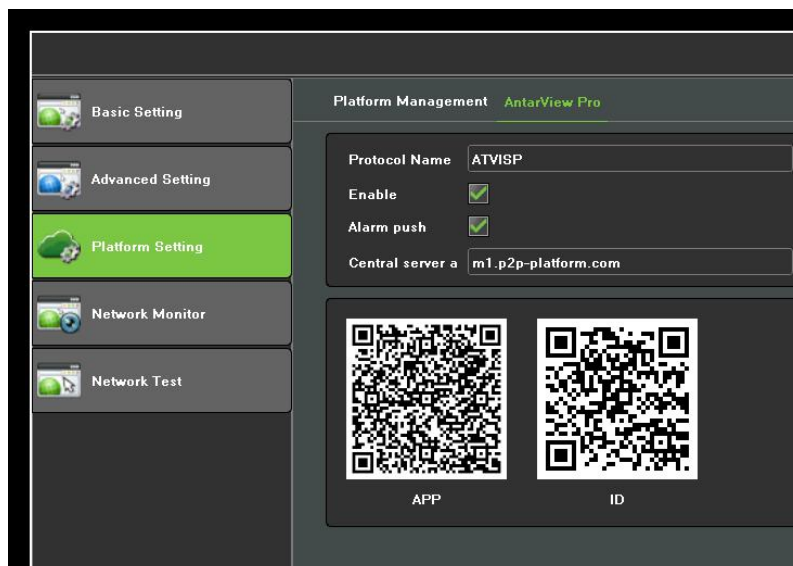

Figure 1.1 Platform Network Management

1.4 Uninstalling

Specific steps are as follows:

1. Enter the mobile application management interface (set Application Management application);
2. Click on the icon of AntarView Pro Mobile Software, enter the application information interface;
3. Click on "Uninstall", then confirm uninstalling the software.

2 Software Startup

2.1 Interface introduction

The following interface will appear when you use our application for the first time.

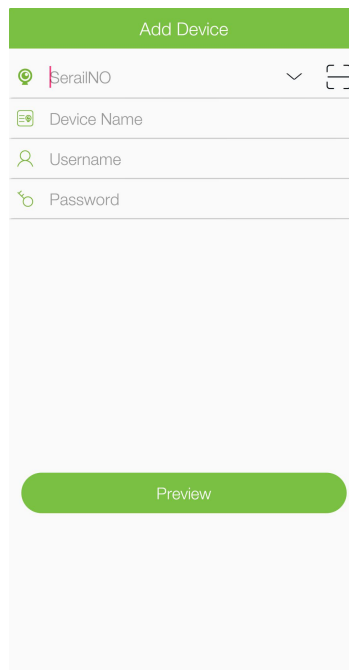

Figure 2.1 Adding a device

You should input the serial number of the device before adding or scanning the QR code from the device. You may customize the device name and set the username and password for the device. For future login, the username and password is required and must be correct. After inputting all the information, tap "Preview" to enter the preview interface.

2.2 Live Interface

You may access remote playback, device management, event Center, remote control, local library, individual centers, system configuration and other modules on the live interface as shown in Figure 2.2.

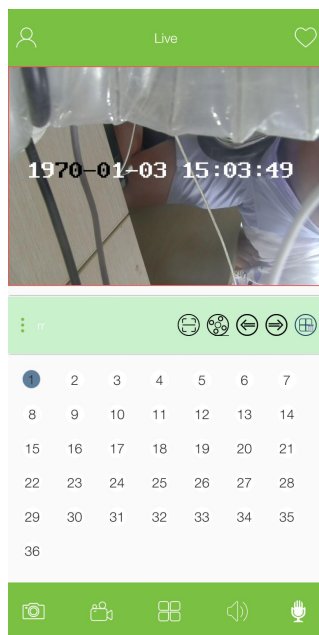

Figure 2.2 Live Interface

ICON	Description	Introduction
	Switch Device	If you have added more than one device, tap this button to select a device which needs further operation.
	QR Code	Tap this button to enter the “Add device” interface to add a device.
	Playback	Tap this button to enter the “Playback” interface.
	Previous Page	Tap this button to enter the previous page of channels.
	Next Page	Tap this button to enter the next page of channels.
	Split Windows Switch	Tap this button to enter or exit the split views mode of display.
	Screenshot	Tap this button to capture the live screen.
	Video Record	Tap this button to start video recording.
	Split Windows View	Tap this button to select “Split Screen mode” to preview.
	Voice Signal Switch	Tap this button to enable or disable voice signal.
	Voice Talkback	Tap this button to enable or disable voice talkback.
	Slide Menu	Tap this button to view the slide menu.

Table 1.1 Buttons Introduction

2.3 Slide Menu

Tap the slide menu icon or slide from the left side of the screen to access the slide menu.

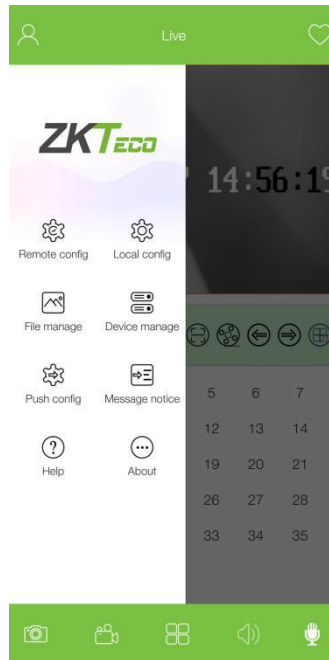

Figure 2.3 Slide Menu

1. Remote config: tap the remote config button to set the configuration of the device added.
2. Local config: tap the local config button to set application's configuration.
3. File manage: tap the file manage button to manage files, such as snapshots, recorded videos.
4. Device manage: tap the device manage button to add and delete devices.
5. Push config: tap the push config button to set the rules for messages received from devices.
6. Message notice: tap the message notice button to check and manage message you have received from the devices.
7. Help: tap the help button to obtain instructions on specific operations you need.
8. About: tap the about button to check the basic information for this application, such as version info.

3 Device Management

3.1 Add a device

Tap the "Device Management" button to access the relevant interface, as shown in Figure 3.1.

Figure 3.1 Interface of "Device Management"

Tap the  button to "add" a new device, as shown in Figure 3.2.

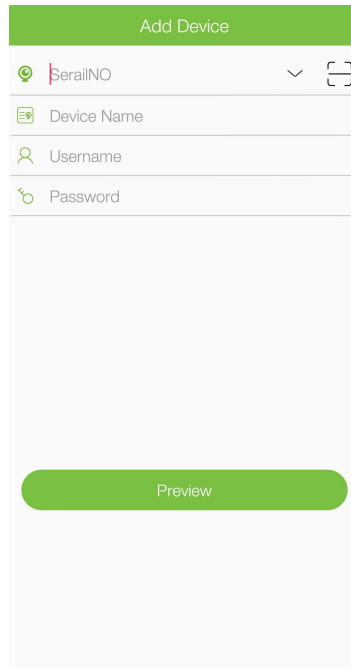

Figure 3.2 Interface of "Add Device"

Option	Description
Serial number	Input the device's number you want to add manually, or scan the device's QR code to automatically fill the serial number.
Device name	You can customize the device name to display on the application.
Username	Input the username to log in.
Password	Input the corresponding password.
Username	Input the corresponding username.
Preview	Fill in the above information, tap this button to access preview.

3.2 Device State

Tap the "Device Management" button to access the management interface, as shown in Figure 3.1. If the color of  button is green, the device is online; otherwise, it is offline.

3.3 Delete a Device

Tap the "Device Management" button to access the management interface, as shown in Figure 3.1. Tap the  button and confirm to delete the corresponding device at the pop-up window.

3.4 Modify a Device

Tap the "Device Management" button to access the management interface as shown in Figure 3.1. Select the device you need to modify and tap the  button to enter the interface and modify the information. As shown in Figure 3.3, modify the information and tap the "Preview" button to save the changes.

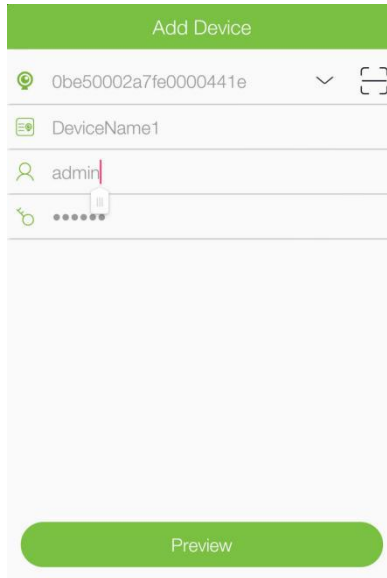

Figure 3.3 Interface of modifying a device

3.5 Check Device Information

Tap the “Device Management” button to access the management interface as shown in Figure 3.1. Select the device you need to modify and tap the  button to access the interface as shown in Figure 3.4.

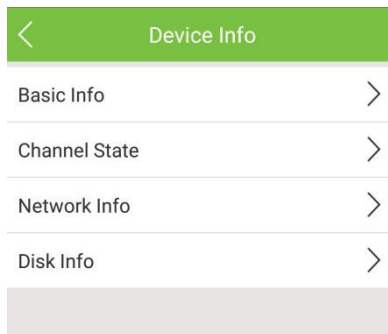

Figure 3.4 Interface of “Device Info”

Tap “Basic Info” to check the basic information of the device. Here is an example.

Figure 3.5 Information of a connected NVR device

Tap “Channel State” and select the channel number to check the channel state of the corresponding device. Here is an example.

Channel State	
Channel NO.	3
State	Online
Primary BitRate	3556kbs
Second BitRate	769kbs

Figure 3.6 State of channel 3

Tap “Network Info” to check network information of the device. Here is an example.

Network Info	
NetCard Name	LAN1
IP Address	10.0.0.33 <input type="checkbox"/> DHCP
NetMask	255.255.0.0
MAC Address	A8:02:61:E3:43:11
HTTP Port	80
RTSP Port	554
RTMP Port	1935
<input type="checkbox"/> Auto DNS	
Preferred DNS	10.0.0.1
Alternate DNS	222.222.222.222
Default Route	LAN1

Figure 3.7 Network information of a connected device

Tap “Disk Info” to check disk information of the device. Here is an example.

Disk Info	
Disk ID	0
Disk capacity(GB)	0
Free space(GB)	0
Disk status	Unknown
Record status	No record
Video loss alarm	Enable

Figure 3.8 Disk information of a connected device

3.6 Channel manage

1. Live video: go to preview interface, select a device you want to control, tap the corresponding number as shown in Figure 3.9, the corresponding channel’s video will then be played on the interface.

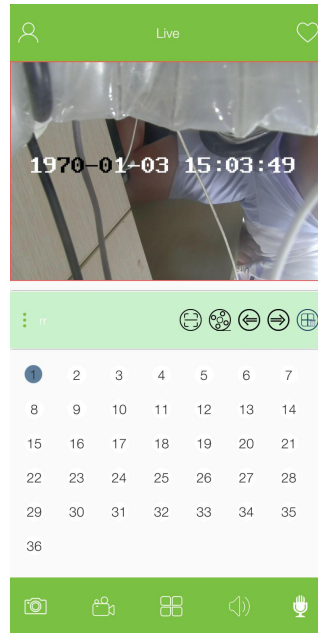

Figure 3.9 Interface of live video

2. Save as Favorite: Tap the channel number to play the live video, tap  to save it as favorite.
