Key Features

Fully integrated Access Control System

The Access Control unit utilises the same keyfobs and cards as the Euro 'G' range intruder alarm systems and with seamless integration, the fob / card can be used to set / unset the alarm system and give access to specific areas. Users can be initiated or deleted remotely via the InSite UDL software.

Expandable to suit your needs

Up to 29 doors can be networked on a system with a maximum of 500 users and therefore the Access Control unit will suit a wide range of applications.

Dedicated access control event memory log

The Separate event memory log which is time and date stamped allows audit trails to be easily accessible via InSite UDL software. This feature can also be utilised as a 'Guard Tour' system whereby guards touring a site can use a programmed tag at suitable readers to log their progress.

Internal timers

Internal timers in the 'G' range of control panels enable the switching of an electronic door release with a programmable door open time from 0 - 250 seconds. 2 Heavy duty relay outputs on the Access Control unit permit the operation of magnetic locks, electronic gates and barriers

Castle Care-Tech Limited is a UK based manufacturer of high technology control equipment for intruder alarms, and as a leading innovator Castle has won numerous awards for products and innovation in recent years, including the European Security Innovation Award, the IFSEC Prism of Excellence, and the DTI Smart Award.
