

Door automation made simple

DIGIWAY, a CDVI Group brand, offers automatic door systems for swing doors for every environment. Now offering advanced features, DIGIWAY is durable, highly reliable, and flexible, simplifying access to the world.

Innovation steps taken

DIGIWAY has always been focused on evolving its two core products according to market advances, technologically and now physically. The DWAA expands the door operator's durability without changing the body creating the long lasting and reliable door automation solution.

A truly universal arm

The DWAA is flexible and will adapt to your installation's needs. Whether you need the door to open inwards or outwards, the traditional articulated arm can be converted into a sliding arm by just fixing the sliding block in place of the tube extension of the articulated arm.

Unprecedented Benefits

- Extended mounting applications
- Suited for door operator installations on older buildings with thicker walls and heavier doors
- Flexible installation thanks to two spherical joints allowing joint movement
- The DWAA is a universal arm: the articulated arm transforms into a sliding arm
- Extension shafts
- Adjustable mounting positions
- Full protection against oxidation and rust
- Suitable for door automation of fire doors

Very robust architecture

Materials: steel, iron, stainless steel

2 spherical joints

11° joint movement

2 types of tube extensions

Construction suited for fire doors
